

## Semi-rotary drive DRRS

**FESTO**

## Characteristics

### At a glance

[Link](#) [drrs](#)

- Rack-and-pinion principle
- Extremely accurate in the end positions
- High load-bearing capacity for the bearing, precise and backlash-free
- High mass moments of inertia
- Defined interfaces
- Supply ports at both ends
- Slots on both sides for mounting proximity switches
- Choice of mounting options
- Perfectly suited for handling applications

### Diagrams

[Link](#) [drrs](#)

The diagrams shown in this document are also available online. These can be used to display precise values.

### Nominal swivel angle [°]

The swivel angle is adjusted via the cushioning elements using a hex screwdriver. If possible, the reduction of the swivel angle should be evenly distributed over both end positions.

- Clockwise direction of rotation: swivel angle decreases
- Anticlockwise direction of rotation: swivel angle increases

### Output shaft

[FH] Flanged shaft, hollow

- The shaft is hollow on the inside. This allows it to be used for carrying electrical signals or compressed air
- Compressed air tubing is required to pass compressed air through the hollow flanged shaft

### Cushioning

Several cushioning variants available

### Position sensing

[A] For proximity sensor

By using proximity switches, any position can be detected.

### Special material properties

Recommended for production systems for manufacturing lithium-ion batteries

Product:

- Metals with more than 1% copper, zinc or nickel by mass are excluded from use. Exceptions are nickel in steel, chemically nickel-plated surfaces, circuit boards, cables, electrical plug connectors and coils

Accessories:

- Please contact your Festo representative for information on which accessories are suitable for manufacturing lithium-ion batteries

1) If, in the end positions, a torque which exceeds 50% of the theoretical torque acts against the direction of rotation, no exact end position is guaranteed.

This can be avoided by using a semi-rotary drive with double the torque.

LABS (PWIS) conformity	VDMA24364-C1-L							
Cleanroom class	Class 9 according to ISO 14644-1							
Suitability for the production of Li-ion batteries	Suitable for battery production according to the Festo internal definition of the degree of severity F1A with restrictions regarding the use of Cu/Zn/Ni							

## Swivel angle

Fundamentally, the following applies:

Swivel angle  $\geq$  cushioning angle

Swivel angle =  $180^\circ +$  difference swivel angle right + difference swivel angle left

1 = difference swivel angle left (+)

2 = difference swivel angle left (-)

3 = cushioning angle

4 = swivel angle

5 = cushioning angle

6 = difference swivel angle right (-)

7 = difference swivel angle right (+)

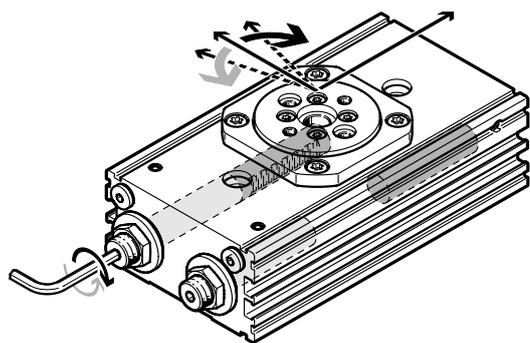

Note: Illustrated position of the flange shaft corresponds to the mid-position (swivel angle  $90^\circ$ ).

Size	12		16		20		25	
Cushioning	Elastic cushioning rings/plates on both sides [P]	Shock absorber, self-adjusting, linear, at both ends [Y9]	Elastic cushioning rings/plates on both sides [P]	Shock absorber, self-adjusting, linear, at both ends [Y9]	Elastic cushioning rings/plates on both sides [P]	Shock absorber, self-adjusting, linear, at both ends [Y9]	Elastic cushioning rings/plates on both sides [P]	Shock absorber, self-adjusting, linear, at both ends [Y9]
Swivel angle	180 deg							
Min. swivel angle <sup>1)</sup>	45 deg	80 deg						
Max. swivel angle	200 deg							
Setting range of swivel angle for each end position <sup>2)</sup>	+10/-100 deg							
Cushioning angle	23.5 deg	34.7 deg	19.5 deg	32.5 deg	27.5 deg	32.8 deg	25.5 deg	40.8 deg

1) Smaller swivel angles are adjustable. However, this reduces the cushioning energy.

2) Continuously adjustable

## Swivel angle adjustment

Direction of rotation to the right:

- Swivel angle decreases

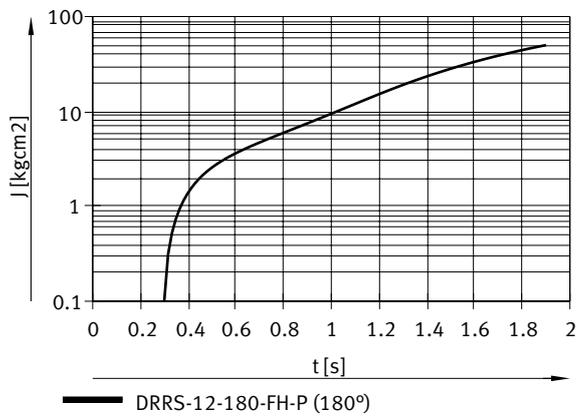

Anticlockwise direction of rotation:

- Swivel angle increases

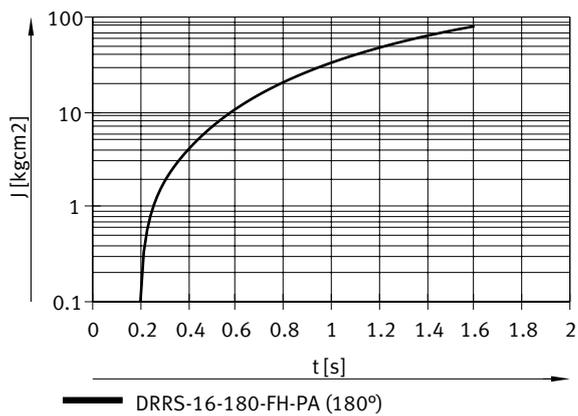

The swivel angle is adjusted via the cushioning elements using a hex screwdriver. If possible, the swivel angle should be reduced evenly over both end positions.
