

Media separated solenoid valve VYKC

FESTO

Characteristics

At a glance Link [vykc](#)

Special characteristics:

- Very easy to clean thanks to media separation
- Low media consumption thanks to small internal volume
- High flow rate with small size
- High repetition accuracy, switching frequency and precision, therefore also suitable for extremely small volumes and dispensing tasks
- Very flexible in use thanks to 3/2-way and 2/2-way variants as well as 12 ... 24 V DC actuation
- Low power consumption due to holding current reduction

Function:

- The media separated solenoid valve VYKC is intended to be mounted on laboratory devices. The product is used to control gaseous and liquid media within its technical data.
- The valve VYKC is a directly actuated valve with solenoid coil. When de-energised, the valve automatically returns to its normal position. A closed or an open normal position (3/2-way solenoid valve only) are available as variants.
